

Active DataComm® is based in Tupelo, MS. Active DataComm is formed as a corporation in the state of Mississippi and began operations in 2001. We offer hardware and software sales along with value added services. Offerings also include Managed Antivirus, Cloud Backups, and Remote Monitoring and Management of networks and end points. Active DataComm began early serving the greater northeast Mississippi and northwest Alabama areas with a fleet of vehicles and on-site technicians for repair and new installations.

Today's Internet Technologies allow us to deliver much of our support offerings via remote monitoring, remote management, and remote support\*. This not only saves the customer both time and money, but minimizes workplace disruption and employee distractions, since a technician need not be physically present.

Beginning as a "break-fix" company and evolving into a managed service provider, MSP, we are excited to now offer Federal, State, and Local Government sales.

For support that needs hands-on expertise, our "best in class" service technicians are dispatched to provide you with A+ service. Our technicians pride themselves on being professional, courteous, efficient, knowledgeable, and certified in their field.
